

Christian J. Girtz

Attorney

- 612-305-1472
- cgirtz@dewittllp.com
- Minneapolis

Service Areas:

- Intellectual Property
- Intellectual Property Litigation

Education:

- J.D., *cum laude*, William Mitchell College of Law
- B.S., Computer Science, University of Minnesota

Admissions:

- Minnesota
- U.S. Patent & Trademark Office (USPTO)
- U.S. District Court for the District of Minnesota

Christian is a partner in DeWitt's Minneapolis office and is a member of its Intellectual Property & Intellectual Property Litigation practice groups. He has extensive legal and software engineering experience, and advises clients in a wide range of areas including patent prosecution, trademarks, trade secrets, and copyrights. His breadth of knowledge includes working with clients on matters related to portfolio management, freedom-to-operate, inter partes review (IPR), licensing, confidentiality agreements, contract negotiations, and IP litigation. He has prosecuted U.S. patent applications in a variety of technical areas, including telecommunications, computer security, database, machine learning, blockchain, computer hardware and software, medical device, and mechanical technologies.

Additionally, his experience includes working as in-house counsel where he managed the company's U.S. and international patent and trademark portfolios, oversaw the company's IP enforcement including advising on patent and trademark litigation strategies, prepared trademark clearance opinions, and interfaced with business leaders and engineering teams to develop the company's U.S. and international IP strategies, including patent, trademark, trade secret, and copyright strategies. Christian also advised on issues related to unfair trade including antidumping and countervailing duties, as well as contract matters.

Prior to graduating from law school, Christian worked as a Lead Software Engineer at Honeywell International where he designed, implemented, and validated real-time embedded software for ring laser gyro and MEMS-based aerospace products. His work included integrating embedded software into in-house ASICs, including debugging via ARM instruction sets, as well as developing test equipment software solutions using Visual Basic and C/C++.

Client Recommendations

“Christian is a pleasure to work with. He is a great patent lawyer with a bright future.” - Client

Notable Representations

LEGAL

- Prosecuted U.S. patent applications and managed client patent portfolios in a variety of technical areas, including telecommunications, computer security, database, machine learning, blockchain, computer hardware, computer software, medical device, and mechanical technologies
- Directed prosecution of international patent portfolios
- Conducted patentability research and analysis, drafted patentability opinions, and advised clients on same
- Conducted freedom-to-operate research and analysis, drafted opinions, and advised clients on potential risks within a particular technological scope
- Drafted license, NDA, clickwrap, software transfer, and other agreements and counseled clients on use
- Advised clients on trademark, copyright, and trade secret issues

COMPUTER SCIENCE / SOFTWARE ENGINEERING

- Designed, implemented, and validated real-time embedded software for ring laser gyro and MEMS-based aerospace products at SEI Capability Maturity Model Level 3 as part of cross-functional team, including implementation of 50+ new communication protocols as part of hardware block change
- Integrated embedded software into in-house ASICs, including debugging via ARM instruction sets
- Designed, implemented, and validated test equipment software solutions using VB and C/C++
- Troubleshoot hardware and software factory test issues in production environment
- Designed and developed MFC class-based Win32 software applications for global healthcare clients
- Wrote backend scripts in proprietary scripting language to interface with Oracle/DB2 databases
- Certified as Design for Six Sigma green belt
